

Organization Roles & Access Policy Guide

Official Access Structure & Security Reference for Users, Team Members, Clients & Community Collaborators

About Sarikonda Labs Governance

At **Sarikonda Labs**, we maintain a secure, transparent, and structured environment for building modern software. This policy outlines how permissions are granted across internal core developers, clients, guest collaborators, and the general public.

Access & Permission Tiers

1. Organization Owner

Founders & Executive Technical Administrators

- **Target Audience:** Organization Founder & Executive Administrators.
- **Permissions:** Full administrative control over organization settings, security policies, billing, member management, and all repositories.
- **Repository Scope:** Implicit full administrative access across every project and repository in **Sarikonda Labs**.
- **Profile Badge:** Displays the verified organization badge on their GitHub personal profile.

2. Organization Member

Core Developers & Permanent Engineering Team

- **Target Audience:** Internal software engineers, core developers, and long-term project leads.
- **Permissions:** Access to organization-wide discussions, project planning boards, internal codebases, and team channels.
- **Repository Scope:** Broad development access tailored by team role (e.g., *Write* access for pushing code, *Triage* for code review).
- **Profile Badge:** Publicly displays official membership in **Sarikonda Labs** on their GitHub personal profile page.

3. Outside Collaborator & Client

External Partners, Freelancers & Project Clients

- **Target Audience:** Clients, external consultants, freelancers, and project-specific guest developers.
- **Permissions:** Strictly restricted to assigned repository boundaries—no access to internal team chats or other private organization projects.
- **Repository Scope:** Explicit permission (*Read* or *Write*) on specific project repositories only.
- **Profile Badge:** Does not display the organization badge, preserving client confidentiality and operational boundary.

4. Community & Public Viewers

Open-Source Contributors, End Users & Visitors

- **Target Audience:** Open-source contributors, visitors, and general public end users.
- **Permissions:** Read-only access to public open-source projects, public documentation, and community discussions.
- **Repository Scope:** Can clone public code, submit issues, and submit pull requests via forks.

Roles & Access Quick Summary

TIER / ROLE	TARGET GROUP	ACCESS BOUNDARY	PROFILE BADGE
1. Owner Admin	Founders & Executive Admins	Full administrative control over settings & repos	Yes (Public)
